

NoteBox Gaming

NoteBox Gaming is a secure storage solution for desktop computers.

NoteBox Gaming has been developed for the purpose of protecting and securing gaming machines or other expensive desktop computers. The box is designed to hold different machines (ATX and IDK/mini towers).

The special and unique cable-security doors ensure that you cannot take the cables out of the box. The key lock on the front also ensures that you can shut down, lock and safely leave your equipment.

It is possible to mount the box either on a wall or under a table, depending on what your needs are.

NoteBox Gaming is designed and developed specifically for desktop gaming computers at schools and institutions, focusing on making the equipment more secure.

NoteBox Gaming

SOLUTIONS

- Designed to secure desktop computers.
- Suitable for most common types of ATX and IDXT/mini towers.
- Secures cables at the rear.
- The lock on the front door secures the equipment.
- Ventilation holes to ensure cooling.
- Top holes for controlling the tower from the top if required.
- It is possible to mount on a wall or under a table.

DEVICES

Desktop computers.
